ABOUT ME

A recent graduate with over one year of hands-on experience in web development, mainly working with Vue.js and Laravel. I enjoy building responsive and user-friendly web applications, integrating APIs, and collaborating with teams in Agile environments. Looking forward to growing as a developer and contributing to real-world projects.

EDUCATION & CERTIFICATIONS

VNU-HCM University of Science | 2021 - 2025

- Majoring in **Information System**, GPA 7.6/10

Certifications

- **945** - TOEIC Listening & Reading
- **320** - TOEIC Writing & Speaking

TECHNICAL SKILLS

- Frontend Development: **HTML, CSS, ReactJS, TailwindCSS, Javascript, Redux Toolkit, Vue.js.**
- Backend & API Development: **C#, NodeJS, ExpressJS, Laravel**
- Version Control & Collaboration Tools: **Git, GitHub, Bitbucket**
- Database: **SQL Server, Oracle, MySQL, MariaDB**

SOFT SKILLS

- Experienced in working with teams using Git and GitHub for version control and project management.
- Familiar with working on collaborative projects using Agile methodologies (Scrum).
- Strong analytical skills in identifying issues, troubleshooting, and implementing effective solutions.

WORK EXPERIENCES

Lampart Co., Ltd. | Software Engineer

May 2025 - Present

- Developed and maintained frontend features using Vue.js and integrated APIs with Laravel backend services.
- Applied Laravel best practices including request validation, service layers, and reusable code structure
- Worked with microservices architecture and participated in database design for core system features
- Collaborated with team members to analyze requirements, maintain code quality, and deliver features efficiently

PROJECTS

Enterprise Management System (Company Project) | Full-stack Developer

Enterprise management web app for employee, attendance, helpdesk, equipment, and meeting room management.

Tech Stack: Vue.js, Laravel, MariaDB, REST API, Socket.IO

- Designed and implemented the Homepage dashboard with reusable Vue.js components for enterprise operations.
- Developed interactive and responsive frontend features to improve employee workflow, task tracking, and accessibility across internal tools
- Built and integrated Laravel APIs for managing dynamic data, user-specific content, and real-time system updates

Realtime Chat Application (Company Project) | Frontend Developer

A realtime communication platform with features for direct messaging, group chats, and team collaboration.

Tech Stack: Vue.js, Laravel, Socket.IO, MariaDB

- Enhanced and updated frontend UI components using Vue.js to improve usability and overall user
- Maintained system stability through bug fixing and preparing technical documentation.

University Management App (Personal Project) | Backend Developer

A Windows Forms application for managing students, staff, and courses with role-based access control and auditing.

Tech Stack: C#, Oracle

- Implemented authentication and authorization using DAC, RBAC, and OLS to control user permissions by role.
- Developed management features for students, staff, and courses, along with an audit system to track user activities.
